- (6) “Elephant Lives Being Traded for Votes in Namibia,” Annamiticus, 2 June 2014 <http://annamiticus.com/2014/06/02/elephant-lives-traded-votes-namibia/>
- (7) IUCN Red List Information - Cheetah (*Acinonyx jubatus*) - The largest of these subpopulations supports an estimated 3,940 individuals,

comprising the majority of the regional population, which is spread across a large transboundary landscape covering Botswana, Namibia, northern South Africa, south-western Zambia and south-western Mozambique <http://www.iucnredlist.org/details/219/0>

(8) Blood Lions - In 2011 Namibia in partnership with SCI launched a census “to manage the sustainability of the leopard population.” A questionnaire was distributed to 1 500 farmers to assess the distribution and relative abundance of leopards throughout Namibia. There were only 400 replies. These, however, were extrapolated which produced a flawed national estimate of leopards of over 14 000
